

# Guidance on outbreaks of influenza (flu) in care homes

## Do 2 or more residents or staff have the following symptoms?

New onset or acute worsening of one or more of these symptoms:

- cough
- runny nose or
  shortness of congestion
- sore throat
- sneezing
- hoarseness
- breath wheezing
- chest pain

Sudden decline in physical or mental ability

If you notice 2 or more residents or staff meeting these criteria, occurring within 2 DAYS (48 HOURS), in the same area of the care home and their GP(s) diagnoses suspected influenza you might have an outbreak

37.8°C

or above

Contact your community infection control team (CICT) or PHE health protection team (HPT) immediately and take the infection control measures listed here

## What the CICT or HPT will do:

- work with care home staff and GPs to identify the cause of the outbreak
- advise on infection control measures
- work with GPs to advise on treatment and prevention

## **INFECTION PREVENTION AND CONTROL MEASURES**

All residents and staff should be offered seasonal flu vaccination each year

### Hand hygiene and protective clothing

- ensure that liquid soap and disposable paper towels are available at all sinks
- wash hands thoroughly using liquid soap and water before and after any contact with residents
- provide 70% alcohol hand rub for visitor use and supplementary use by staff
- staff should wear single-use plastic aprons and gloves as appropriate when dealing with affected residents. The HPT will advise on the use of surgical masks. Dispose of all these as infectious waste

#### Cleaning and waste disposal

- provide tissues and no-touch bins for used tissue disposal in public areas
- provide tissues and covered sputum pots for affected residents. Dispose of these as infectious waste
- wash residents' clothes, linen and soft furnishings on a regular basis, and keep all rooms clean

Clean surfaces of lockers, tables & chairs. televisions and floors etc frequently. Always clean hoists, lifting aids, baths and showers thoroughly between patients.

## Reducing exposure

- close the home (and any day care facility) to new admissions if the HPT confirms an outbreak
- residents should not transfer to other homes/attend external activities
- residents should only attend out-patient or investigation appointments where these are clinically urgent
- care for residents with symptoms in single rooms until fully recovered and for at least 5 days after the symptoms started
- affected residents should remain in their rooms as far as possible. Discourage residents with symptoms from using common areas
- staff should work in separate teams: one team caring for affected residents and the other caring for unaffected residents
- agency and temporary staff in contact with residents with symptoms should not work elsewhere (e.g. in a local acute care hospital) until 5 days after last exposure
- staff and visitors with symptoms should be excluded from the home until fully recovered and for at least 5 days after the onset of symptoms
- the elderly, very young and pregnant women, who are at greater risk from the complications of flu, should be discouraged from visiting during an outbreak
- inform visiting health professionals of the outbreak and rearrange non urgent visits to the home, if possible
- inform the hospital in advance if a resident requires admission to hospital during the outbreak
